Catalyst One Agricluster

Abbotsford BC

The plan...

- Study what has been across the planet
- Identify sizing for optimum Canadian installations
- Choose the best location (opportunity/risk mitigation)
- Develop roadmap
- Design a template for IRR solutions (14 core potentials)
- Select premium technology providers
- Build a business plan around the two established revenue streams
- Lock EVERYTHING down
- Get it funded
- Build it
- Build 125 copies of Catalyst One across the country.
- Get wealthy!

Seems simple enough!

The reality

- When you are first, NOTHING is certain
- When you eliminate or mitigate all of the known issues... new ones will be created
- Status quo is a common defence of not changing
- Fear is a common barrier to progress

My recommendations

- Never do anything for one reason
- Have multiple layers of success indicators
- Engineer "give" points in your plan to control where the blow out occurs
- Have layers of support for your plan
- Plan for perfection
- Prepare, to be sure of survival

“A single solution in isolation is linear; we cannot respond to dynamic challenges with linear solutions.”
