

Oil and Gas: Common Themes

- Proven technologies and practices that support verifiable emission reduction.
- Member countries and companies are developing and implementing emissions reductions projects.
- Some have successfully submitted CDM project proposals.

Oil and Gas: Commonly Expressed Needs

- Standardized Methodology Development
 - Facility evaluation protocols
 - Baseline & reduction opportunity quantification
 - Project design & economics analysis
 - Ongoing monitoring & verification
- Methods must allow for the following:
 - International carbon market opportunities
 - Domestic Cap & Trade regulation compliance
 - Alignment with corporate energy or emissions intensity reduction objectives

Oil and Gas: Commonly Expressed Needs

- Integrated training programs to address fugitive emissions & energy efficiency
- Real, implementable solutions
- Successes transfer easily to like facilities/operations globally
